Community Flare v1.24

This document contains the following sections:

Installation

Installing via CurseForge: You can download Community Flare from CurseForge using the CurseForge app. Type Community Flare in the CurseForge search bar and press Enter/Return. Click Install to install Community Flare.

Upgrading via CurseForge: Community Flare will automatically upgrade, along with your other CurseForge addons, when you open the CurseForge app.

Installing manually for the first time: To install Community Flare for the first time, unzip the `Community_Flare_v1.24.zip` file and add the `Community_Flare` folder to your `AddOns` folder:

Windows: `World of Warcraft\_retail_\Interface\AddOns`

Mac: `World of Warcraft/_retail_/Interface/AddOns`

Be sure to issue the `/reload` command in-game for changes to take effect.

Updating manually: If you are updating Community Flare, remove the old `Community_Flare` folder before adding the new one.

Commands and Options

Commands are typed in a chat window. The various options are set in-game in: `esc - Options - AddOns - Community Flare`. You can access the various options from the number (`#`) just above the minimap and below the "show calendar" button. Click the number, then choose `Community Flare`.

Commands

Command	Description
`/comf`	In a battleground, typing this command reports the number of healers and tanks on each team, a list of all Community members, and the total number of Community members in the battleground. When not in a battleground, the `/comf` command reports: `Community: Not in Battleground yet`
`/comf debug`	Helps with debugging issues for Mesostealthy & others to report. (Must have Debug Mode enabled to utilize.)
`/comf defaults`	Sets all profile settings back to defaults.
`/comf deployed`	Checks if you still have people in community deployed in PVP.

`/comf find <x><y>`	These commands are used to search Community Member database for various information.
	`/comf find`
	    `<x>` = `inactive` to search for members who you have never seen online.
	    `<x>` = `nocompleted` to search for members who have never completed a match with you.
	    `<x>` = `nogrouped` to search for members who have never grouped with you.
	        `y` = Short name for Communities to search from a specific Community.
	
	Examples:
	`/comf find inactive <community>` lists all inactive community members in the short-named community.
	
	`/comf find nogrouped <community>` lists members in the short-named community who have never grouped with you.

`/comf find inactivity <community short name>`	Searches Community Member database for members not active more than 60 days.
`/comf find old`	If someone leaves a community, this command will tell you when they left. The database refreshes every 7 days so you will want to use it before it refreshes.
`/comf leaders`	Checks the order in which leaders get promoted in Battlegrounds.

Command	Description
`/comf options`	Opens the Community Flare options.
`/comf perf`	Debug command to see the Performance Metrics for Community Flare.
`/comf plm`	Opens the Player List Manager. Use this to manage the Players and KOS in the Member GUIDs list. Use this command to search for players. Right click a player's name to add them to or delete them from your KOS list. You can also set a player note. If players on your KOS list are in a battleground with you, you will receive one raid warning to inform you of their presence. Note: Clicking the `Player List Manager?` button in the Database Options also brings up the Player List Manager.
`/comf pois`	Debug command to view all points of interest in your location.
`/comf refresh`	Attempts to read the Community members from the blizzard server into your local user database again.
`/comf report`	Sends your current queues to community, with auto `INV` message if enabled & party has room.
`/comf reset [type]`	This command will now reset clubs/members/positions by using those words as type.
`/comf vehicles`	Debug command to view all vehicles in your current location.
`/comf vignettes`	Debug command to view all vignettes in your current location.
`!cf`	Issuing this command in party chat shows the party members using Community Flare and the version.
`!status`	Whispering `!status` to anyone in a battleground using Community Flare will whisper to you the current status of the battleground. It also works with battle.net whispers. You can also use it in party chat in the event that you didn't enter the battleground and the leader in the party did. The party leader returns the status. The user issuing the `!status` command will be notified when the battleground ends. Whisper commands only respond to senders that are in your same communities. **Note**: We recommend using this command in a battle.net whisper so if you log out of your toon, notification of the end of the battleground will be sent to your battle.net account.

Community Options

Option	Description
`Guild Members?`	Checking this option will treat your Guild Members as Community Members. Default: Unchecked
`Main Community?`	Allows you to choose the community from your subscribed list from the pull down menu. Default: `None`
`Other Communities?`	Select other communities from your subscribed list that you would like to use with Community Flare. Default: none checked Note: Below this option is the number of database members found (in main and other community databases that you have selected).
`Community Leaders?`	Choose the communities that you want to build the leaders list from.
`Refresh Members` button	Use this to refresh the Members Database from currently selected Communities.
`Rebuild Members` button	Use this to totally rebuild the Members Database from currently selected Communities.
`Always remove, then re-add Community Channels to General?`	Automatically deletes communities channels from general and re-adds them upon login. Default: unchecked

`Frequency?`	This is the amount of time delayed between notification of Mage attacks in Ashran. (`15 seconds, 30 seconds, 60 seconds`) Default: `30 seconds`
`Notify you when the Ancient Inferno has spawned?`	This will show when a raid warning to you when the Ancient Inferno has spawned in Ashran. (`None, Raid Warning, Local Warning Only, Instance Chat Warning`) Default: `Local Warning Only`

Database Options

Option	Description
`Player List Manager?` Button	Use this to manage the Players and KOS in the Member GUIDs list. Clicking this button brings up the Community Flare Player List Manager (you can also use (`/comf plm`) where you can search for players. Right click a player's name to add them to or delete them from your KOS list. You can also set a player note. If players on your KOS list are in a battleground with you, you will receive one raid warning to inform you of their presence.

Invite Options

Option	Description
`Automatically accept invites from Battle.NET friends?`	Check to automatically accept group/party invites from Battle.NET friends. Uncheck to manually accept or refuse invites from Battle.NET friends. Default: checked
`Automatically accept invites from Community members?`	Check to automatically accept group/party invites from Community members. Uncheck to manually accept or refuse invites from Community members. Default: checked

Party Options

Option	Description
`Max Party Size`	Select from pull-down menu. Select `1 member`, `2 members`, `3 members`, `4 members`, `5 members`. Default: `5 members`
`Notify you upon given Party Leadership`	Select from pull-down menu if you would like to notified via raid warning when you are given leadership of your party. (`None, Local Warning Only`) Default: `Local Warning Only`
`Always request party leadership? (Community Leaders Only)`	Checking this box will always attempt to request party leadership upon joining a new party. Default: unchecked
`Notify you upon party member zone changes?`	Checking this box will show you a message when a party member changes zones. Default: checked

Queue Options

Option	Description
`Always automatically queue?`	Checking this will automatically accept all queues for you. Default: unchecked
`Automatically queue if your group leader is your Battle.Net friend?`	Checking this will automatically queue if your group leader is your Battle.Net friend. Default: checked
`Automatically queue if your group leader is in community?`	Checking this will automatically queue if your group leader is in Community. Default: checked
`Display notification for popped groups?`	Checking this will display a notification in your General chat window when groups pop. Default: unchecked

Option	Description
`Warn if/when queues become paused?`	If checked, will provide a warning message or popup message for Group Leaders, if/when their queue becomes paused. Default: None
`Warn when honor capped or close to it?`	Checking this will provide a warning message when you are honor capped, or close to it when queueing. Default: checked
`Uninvite any players that are AFK?`	Select from pull-down menu for the number of seconds before AFK players are uninvited (`Disabled, 3 seconds, 4 seconds, 5 seconds, 6 seconds`). Default: `Disabled` **Note**: If you have the Community Flare addon with auto queue enabled, you will auto queue and never be AFK/kicked.
`Force PVP Role?`	This setting forces a role (`Tank, Healer, DPS`) if you are invited to a party that is already in queue! Default: None checked

Report Options

Option	Description
`Report queue status to communities?`	Checking this will provide a quick popup message for you to send your queue status to the Community chat. Default: checked
`Communities to Report to?`	Choose the communities that you want to report info to. Default: The community you chose as your Main Community under Community Options will be checked by default.

World Options

Option	Description

Debug Options

Option	Description
`Enable debug mode to help debug issues.`	Check this to have Community Flare do various things to help debug issues in the addon. Uncheck to disable debugging issues. Default: unchecked

Profiles

You can change the active database profile, so you can have different settings for every character.

Option	Description
`Reset the current profile back to its default values, in case your configuration is broken, or in case you simply want to start over.`	Click the `Reset Profile` button to reset the current profile.
`You can either create a new profile by entering a name in the editbox or choose one of the already existing profiles.`	You can create a new profile by entering a name in the edit box, or you can choose one of the already existing profiles from the pulldown menu.
`Copy the settings from one existing profile into the currently active profile.`	Select the existing profile from the pulldown menu.
`Delete existing and unused profiles from the database to save space, and cleanup the SavedVariables file.`	Choose the profile you wish to delete from the pulldown menu.

Note: Just because you do not see an option doing anything on screen doesn't mean it isn't doing something.

Summary of New Features

Community Flare v1.24

- Setting: Display notification for popped groups under Queue Options?
- Minor bugfixes.
